TO BK

1. (Previously Presented) A sewing apparatus comprising:
a sewing mechanism in which a needle thread is used;
a cassette mount to which a thread cassette, while in a closed state, holding the needle thread used in the sewing mechanism is detachably attached;
a determining unit determining a type of the thread cassette attached to the cassette mount; and
a control device controlling the sewing mechanism according to the type of the thread cassette determined by the determining unit.
2. (Previously Presented) A sewing apparatus according to claim 1, further comprising an adjuster adjusting a thread tension of the needle thread supplied from the thread cassette attached to the cassette mount, wherein the control device controls the adjuster according to the type of the thread cassette determined by the determining unit.
3. (Original) A sewing apparatus according to claim 1, wherein the sewing mechanism includes a feeder for feeding a piece of cloth to be sewn and a needle swinging unit which swings a sewing needle horizontally, wherein the control device controls at least one of an amount of feed by the feeder and an amount of swing by the needle swinging unit according to the type of the thread cassette determined by the determining unit.
4. (Original) A sewing apparatus according to claim 1, further comprising a selector selecting one of a plurality of types of sewing modes performed by the sewing mechanism, wherein the control device controls the sewing mechanism according to the type of sewing mode selected by the selector and the type of thread cassette determined by the determining unit.
